Bee Informed Partnership Tech Team Summary Report for All History in Your Operation

Beekeeper: MW-TN **Your Tech Team:** Remote

Report date: 10/12/20

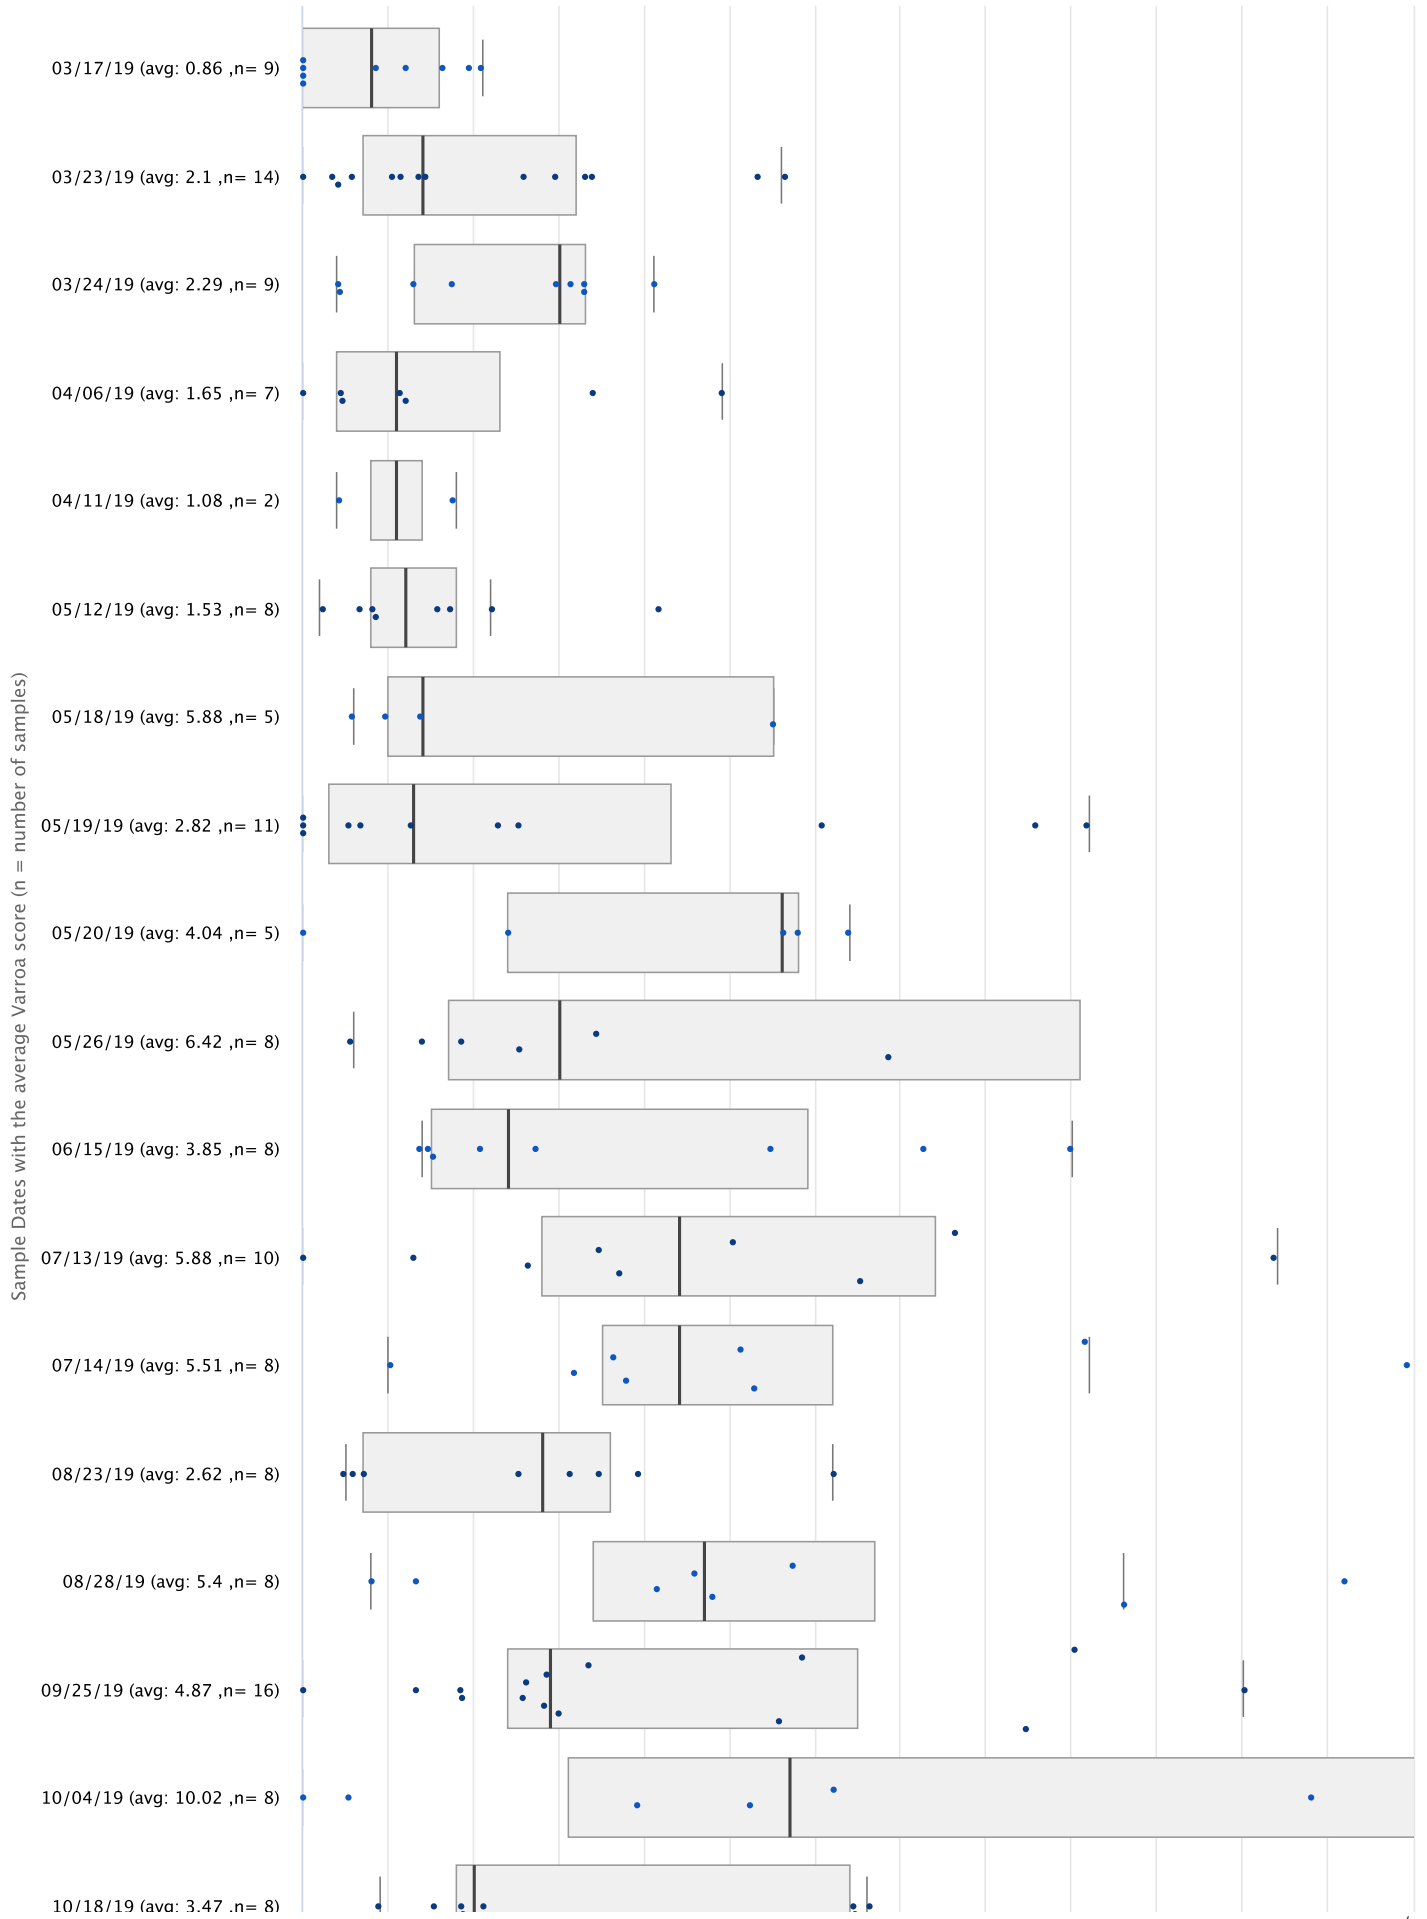

Date Range for Report: 01/01/19 - 12/31/19

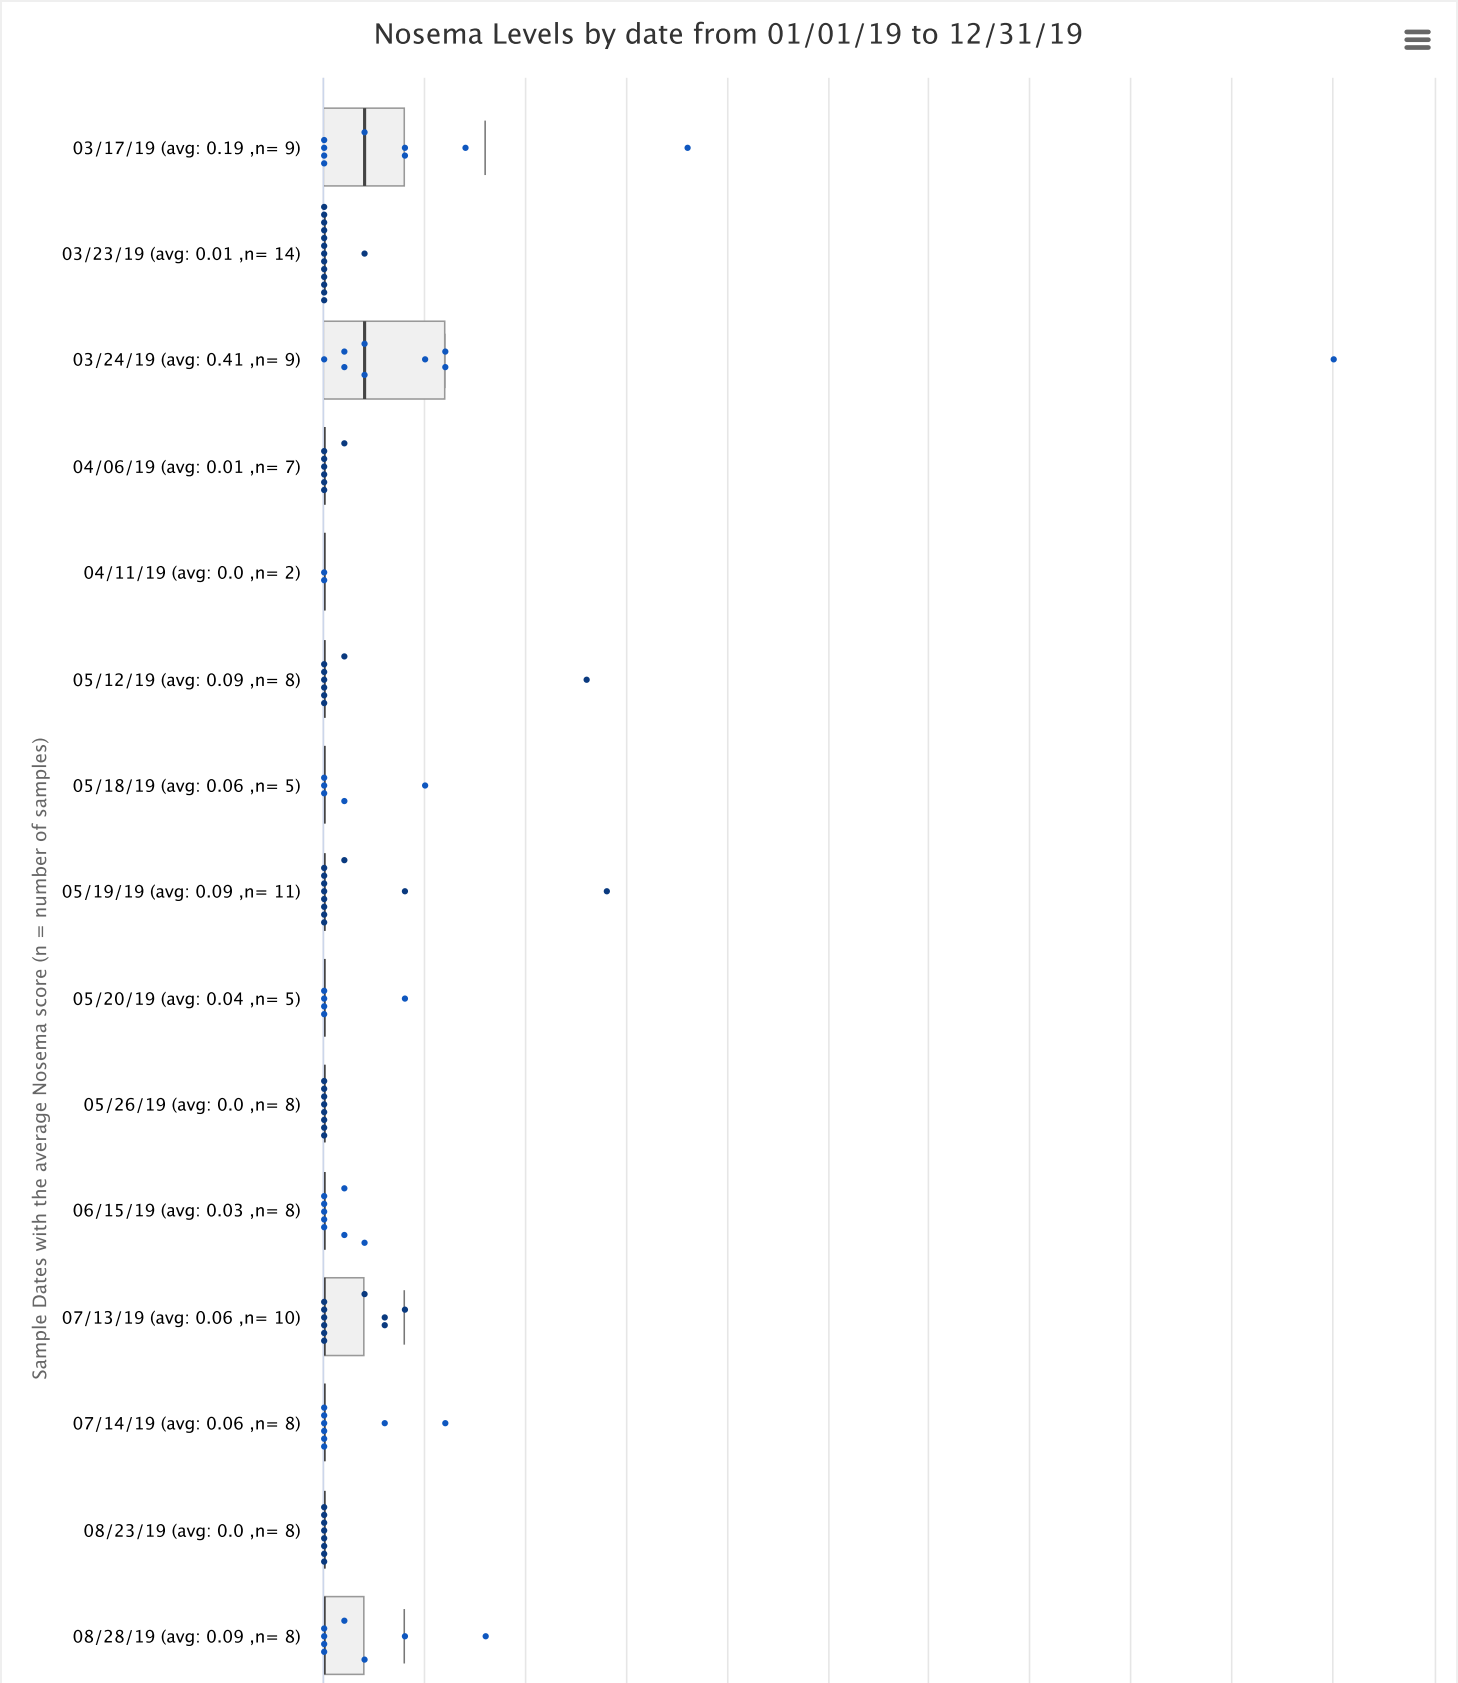

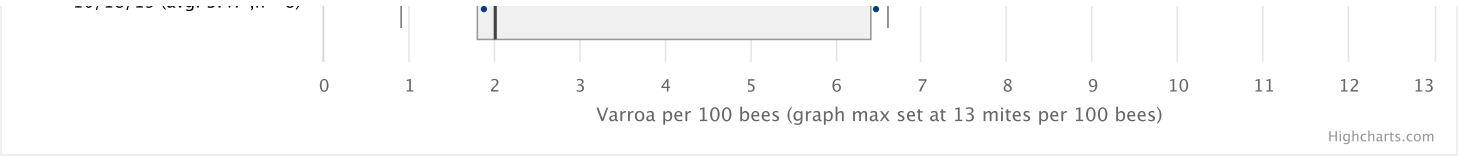

The trends report provides Varroa, Nosema, and frames of bees levels by date or sample event. Each point represents an observation, while the box plot represents the maximum and minimal values as well as the median and upper, lower quartiles.

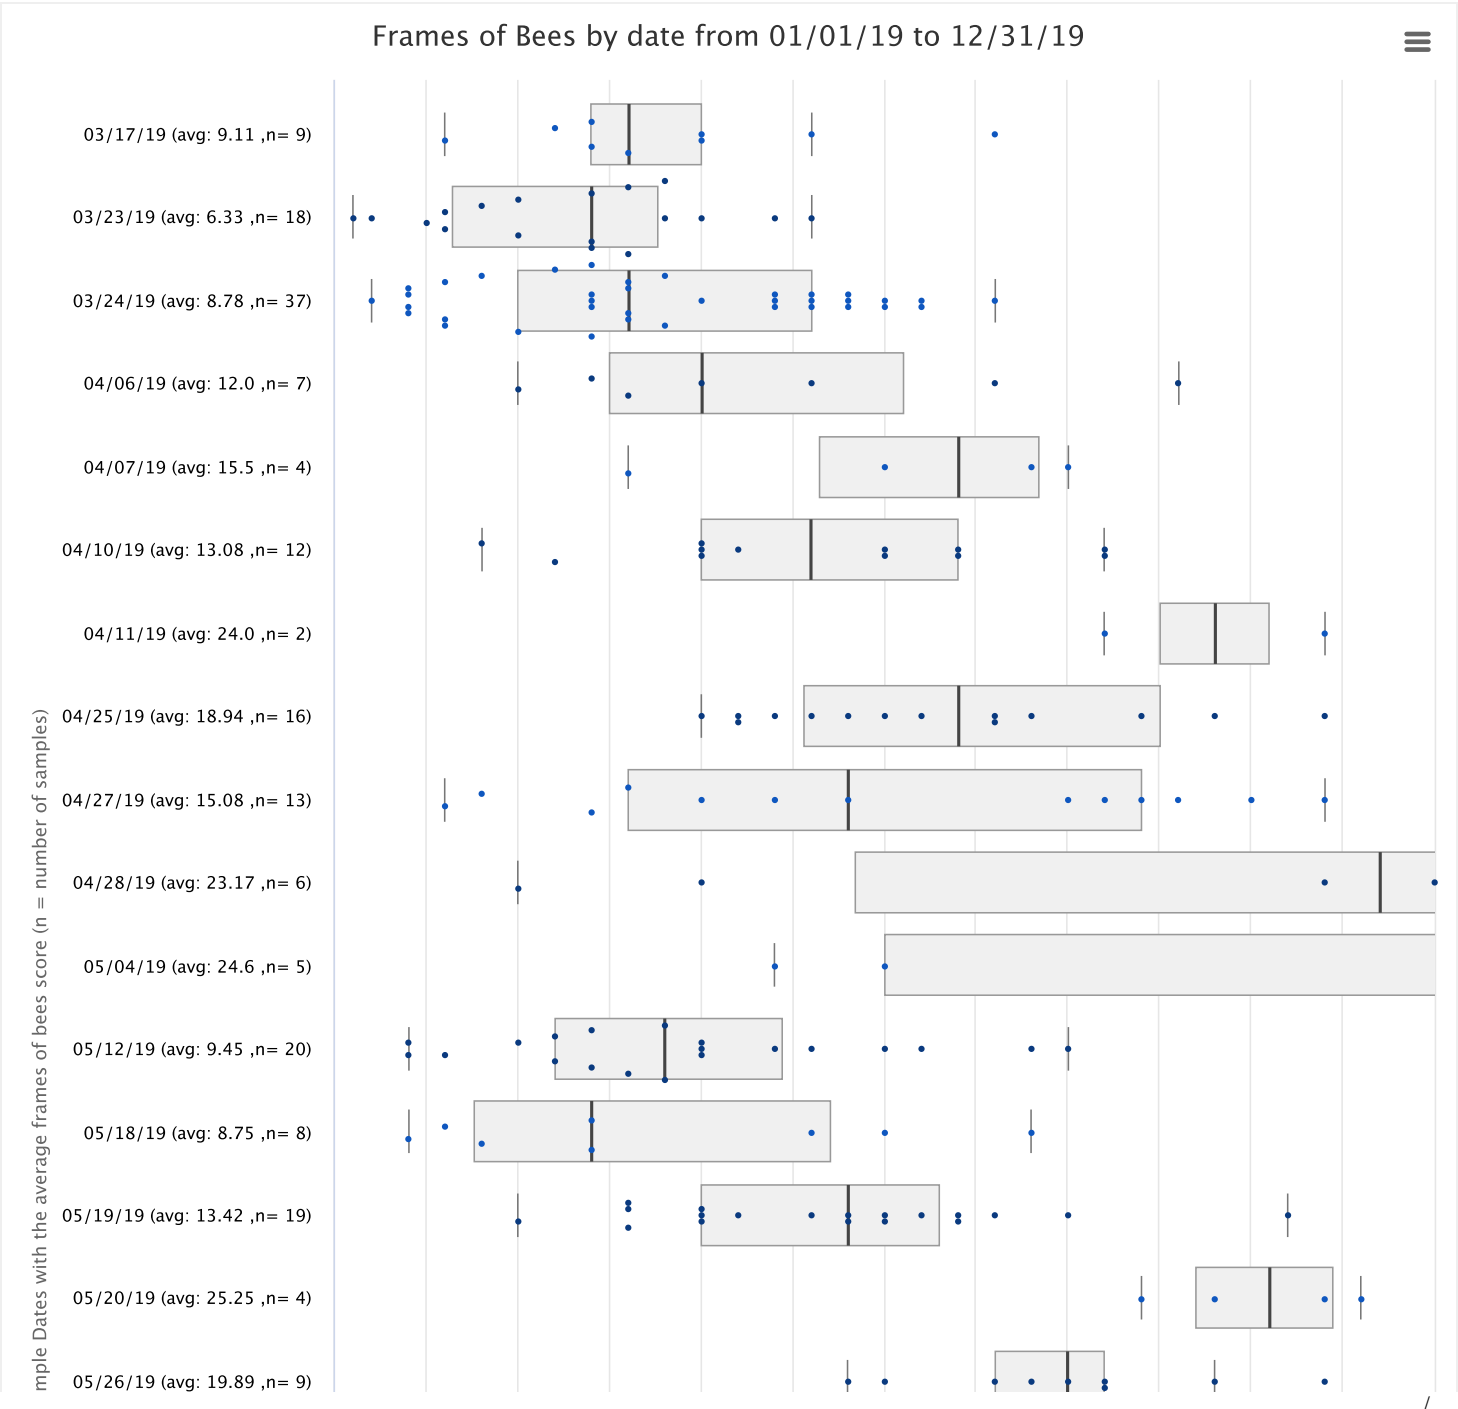

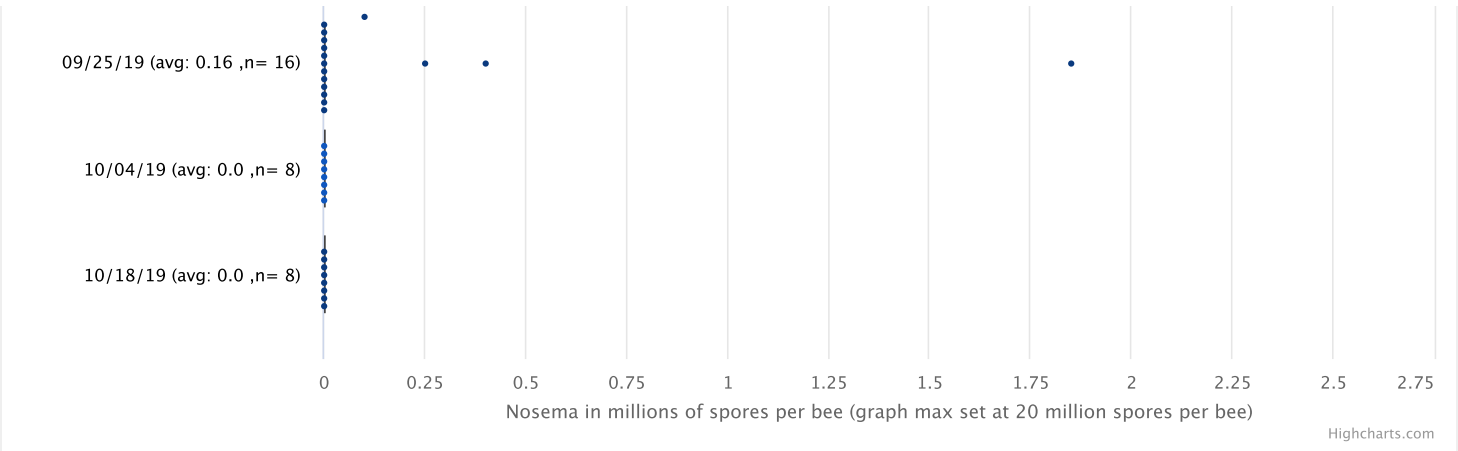

The heatmap chart shows the presence of observed diseases and conditions in a percentage of colonies with the condition found. The number of observations is given as 'max n=' with the term 'max' used because each condition may or may not have been checked for every colony. If you have any questions, don't hesitate to contact us.

Sincerely, The Bee Informed Partnership Team

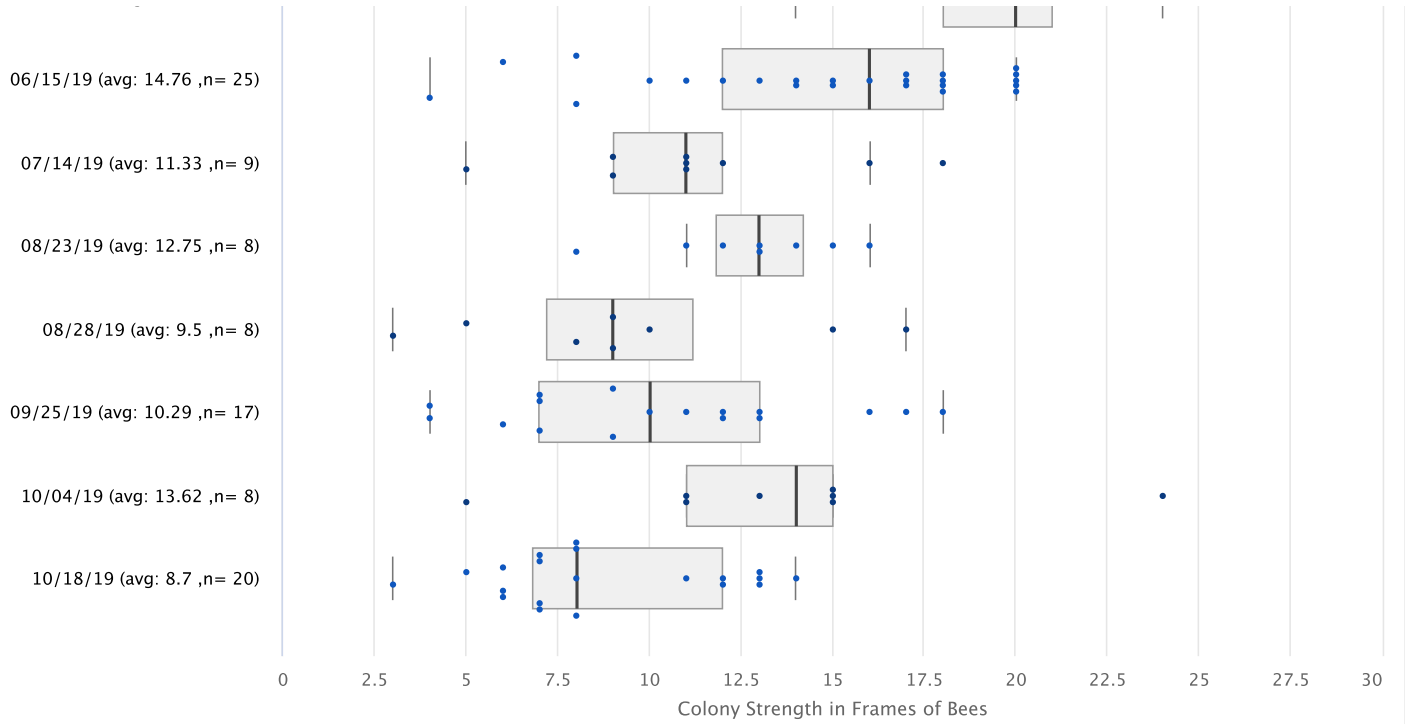

Varroa Levels by date from 01/01/19 to 12/31/19
